

5000+ patients cured with
Zero Medicine/Money/Mortality

N.I.C.E

way to

Cure
COVID-19

A N.I.C.E initiative by
Dr. Biswaroop Roy Chowdhury

PRESENTED BY

Network of Influenza Care Experts

Corona Truth (all evidences in the book)

- 1) There is no evidence to prove that SARS-CoV-2 is a new virus.
- 2) Covid-19 is just like a normal Flu in terms of Case Fatality Rate (CFR) and rate of transmission (R0) and not a life threatening disease for children or adults or even elderly people.
- 3) Wearing a mask cannot protect you from an upper respiratory tract infection(URT); however, it can make you very sick.
- 4) There is no evidence to prove that social distancing and lockdown can prevent an epidemic; however, there are evidences to prove the opposite.
- 5) There is no evidence of Pandemic /Epidemic due to SARS-CoV-2 or any other virus.

Challenge 

Prove me wrong for any of the above and get INR 1 lakh as a prize.

- Dr. Biswaroop Roy Chowdhury

OBSERVATIONAL STUDY

(All evidences in the book)

Our conclusion after successfully treating 5000 + ILI/Covid-19 patients with three step Flu diet:

- 1) The rate of transmission (R_0) of SARS-CoV-2 is comparable to that of common cold.
- 2) The mortality rate of Covid-19 is comparable to that of seasonal Flu.
- 3) In the absence of social distancing, the retransmission rate and the chances of infecting a person (symptomatically and not diagnostically) is surprisingly less than 2 % .
- 4) Within the first 24 hours of three step Flu diet, the temperature comes to $\leq 100^\circ$ F for $\geq 90\%$ of the patients.
- 5) Within the first 48 hours of the three step Flu diet, 60 % of the patients tested negative for Covid-19
- 6) Within 72 hours of the three step Flu diet,
 - (i) All symptoms were resolved for approximately 80% of the patients.
 - (ii) 75 % of the patients tested negative for Covid-19
- 7) With the three step Flu diet for 3 days followed by D.I.P. Diet:
 - 95 % of the patients recovered within 7 days
 - 100 % of the patients recovered within 14 days
- 8) It is possible to successfully treat severely ill ILI/Covid-19 patients in home setting with zero medicines/without oxygen cylinders or external respiratory support. Severely ill means:
 - Temperature $\geq 104^\circ$ F
 - $SpO_2 \leq 75\%$
 - Severe Pneumonia
 - Acute Respiratory Distress Syndrome
- 9) For more than 95% of the patients and their family members, the panic situation is not due to symptoms/physical discomfort rather it is due to the Covid-19 phobia and fear psychosis.

SECTION-I

Solving the Mystery of Covid-19

I have a rare privilege of treating and curing more than 5000 patients that too, at the peak of the pandemic between June 5, 2020 and July 14, 2020. All this has been possible with the help of my network of more than 200 Influenza Experts spread all across the country (and few outside the country also).

We achieved cent per cent cure with zero medication and zero per cent mortality, with more than 80% of the patients, who could resolve their symptoms in 72 hours of following the three day Flu diet (details of which are given in the chapters that follow) and 75% of the patients (among those who went for second RT-PCR test for SARS-CoV-2) tested negative for SARS-CoV-2.

The above results may be baffling and may look manipulated and over exaggerated for conventional doctors with a mindset of treating Influenza/Covid-19 patients with the medicine protocol set by WHO, where they are used to see about 3-4% mortality with average hospital discharge rate of 14 days, but for me, the mystery was something else.

Out of the 5000 + patients with the classical Influenza like illness (ILI) symptoms as defined by CDC, about 1000 patients came to us with SARS-CoV-2 positive test report through RT-PCR, and the rest came to us without going for RT-PCR test for Covid-19. This means, out of 5000 ILI patients, 1000 were Covid-19 patients and rest 4000 were non Covid-19 ILI patients.

If we go by the guidelines of issuing death certificates released by ICMR¹(Indian Council of Medical Research), if any person dies with the classical symptoms of ILI, then the cause of death should

be mentioned as Covid-19 even if the RT-PCR test for SARS-CoV-2 is negative before or after the death. This means, ICMR believes that 100% of ILI patients have a single causative agent and that should be SARS-CoV-2, although this theory of ICMR does not have any evidence in the medical literature.

Going by the guidelines of “How to Report in Death Certificates” by ICMR, technically, I should say that in the last 40 days, we have cured 5000+ Covid-19 patients. However, the causative agent of the symptoms of Flu or ILI can be among more than 200 viruses as identified till date and also, it could be other pathogens including bacteria, fungi and even non-parasite cause including side effects of the drugs etc.

The mystery for me while treating these 5000+ patients was that I could not find any particular symptom among the ILI patients with Covid-19 positive status which is unique to them (1000 patients with positive RT-PCR report) and can be distinguishable from the rest of 4000 patients (surely many out of them might be having causative agent other than SARS-CoV-2).

My First Conclusion...

Symptomatically, Covid-19 patients are identical to other ILI patients with no unique sign or pattern of recovery.

To unfold the mystery rather to solve the puzzle called Covid-19, I will take you to the first week of January 2020 (around 4-7 January) with the headline in most of the newspapers across the world “Cause of Wuhan’s mysterious Pneumonia cases still unknown, Chinese officials say”,² which even WHO acknowledged on January 5, 2020 on their website³.

As per WHO, on January 3, 2020⁴, a total of 44 patients with

Pneumonia of unknown etiology were reported by the national authorities of China.

Knowing that each year more than 2.5 million⁵ people die of Pneumonia and around 450 million population, who suffers from Pneumonia or ILI, the intriguing question is how the health authorities distinguish those reported 44 patients as Pneumonia with unknown etiology. Let's have a look at the following facts:

- 1) In more than 60% of the ILI, no virus could be detected.⁶
- 2) In more than 20% of Pneumonia, no causative agent could be detected. ⁷

My Argument

1. All across the world including your neighbourhood, for every ten patients with ILI (symptomatically) at least six will not be detected with any of the virus known for ILI.
2. For every ten patients with Pneumonia, at least two will not be detected with any unknown causative agent.

Meaning thereby that more than 60% patients with ILI can be called as ILI patients with unknown etiology (cause)

And

20% of Pneumonia patients with unknown etiology

Or

20% of them can be called as mysterious Pneumonia.

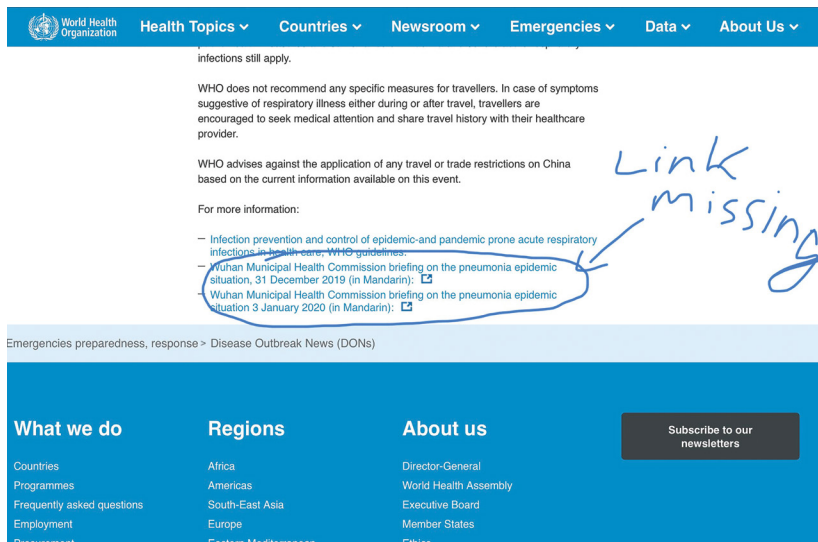

Here, I must remind you that symptomatically, the Covid-19 patients do not show any unique characteristics or sign or pattern that is distinguishable from other ILI/Pneumonia patients and also it is literally not possible to rule out all the known causes of Pneumonia as there are thousands of causative agents which may lead to Pneumonia. Diagnostically, the best tool available to science is PCR test (which is known as gold standard) but with high false

positive meaning that when PCR test will be conducted for more than 200 viruses known to humans, to be the causative agent of ILI/ Pneumonia, statistically (on an average) it will show positive for at least two of the 200 viruses, even in the absence of any of the 200 viruses, since the specificity of PCR-test, by design cannot be more than 99%,⁸ which translates to showing two viruses as a causative agent, even if none of them may be present.

Now, virtually there are no means to know, whether the test positive is a TRUE positive or FALSE positive.

Conclusively, the positive result (even though it is FALSE positive) could be accepted as a causative agent of the ILI for a particular patient.

Hence, the question is what was the basis of deciding that the causative agent of Pneumonia among the 44 patients is of unknown etiology. I tried to refer to the WHO website at the link (see the box below) but the matter does not exist.

Since WHO and China health authorities have not given any data or evidence or study to prove, how can they rule out the possibility of all known causes for Pneumonia and also how they came to the conclusion that SARS-CoV-2 may be the causative agent of Pneumonia among those 44 patients, and even if it is the causative agent, it may not be a new virus to the human being, rather may be one of the causative agents of Pneumonia among those 20% patients, for whom causative agent could not be detected earlier.

In simple language, SARS-CoV-2 may have been causing ILI/ Pneumonia since long, but it is now we devised a method to detect the virus.

My Conclusion

Based on my experience of treating 5000+ patients and also with the above evidence, we can conclude that SARS-CoV-2 is not a new virus, with no unique illness/symptom, specially when WHO or China has not given any evidence to prove it to be a new virus.

Hence announcing Pandemic is technically wrong as by definition⁹ Pandemic means worldwide spread of a new disease. If we talk of India, even the Epidemic Act 1897, as implemented by the Government of India is unconstitutional and unwarranted since by WHO definition,¹⁰ epidemic means occurrence of an illness clearly in excess of normal expectancy. For India, the average number of deaths due to Pneumonia is 1.5 lakh per year and also the death due to Covid-19 as on July 13, 2020 is 22, 000 which may not be true Covid deaths, rather deaths with SARS-CoV-2 due to experimental medical procedures and co-morbid conditions (as explained in the later chapters).

We must remind ourselves that the basis of lockdown and social distancing with the announcement of Pandemic and

implementation of Epidemic Act was the following prediction¹¹ by WHO in the month of March 2020.

Prediction no1

Prediction for the world

If no lockdown or social distancing or other preventive measures are taken then nearly 4 crore people will be killed worldwide and if all the prevention and lockdown measures are followed even then 2 crore people will die worldwide in the next few months.

Prediction no 2

Prediction for India

If no lockdown or social distancing or other preventive measures are taken, then up to 60,96,359 people will die and if all the WHO guidelines of lockdown or social distancing are followed then about 23,75,803 people will be killed due to Covid-19 in the next few months.

Now with serology survey by ICMR, it is established that the Case Fatality Rate (CFR) of Covid-19 is 0.08%,¹² which is lower than the seasonal Flu and the rate of transmission (RO) is 1.15¹³ which is less than the common cold, meaning thereby Covid-19 is neither deadly nor infectious as has been predicted and projected.

Fortunately, with a very low CFR and RO, the death worldwide and also in India, is nowhere near to the WHO prediction.

Hence to normalize everything around, we just need to erase three words from our lives:

It is not a MYSTERIOUS virus

NO EPIDEMIC

NO PANDEMIC

Through repeated hammering and through media and phone caller tune, you are made to believe that it is a mysterious deadly virus causing high casualty, but with no supportive evidence.

Why so many Corona deaths? Answer in Three Steps How to Cure Covid-19?

**(Based on the lecture delivered on June 5, 2020
at the launch of N.I.C.E.)**

How can one become a warrior? For this, I was making a framework for the last two months named as N.I.C.E. (Network of Influenza Care Experts) and it was launched on June 5, 2020 at 5 pm on the occasion of World Environment day. It is a network of trained people spread across the entire country and after the launch, if there is a symptom of ILI/Flu (I don't call it Corona), due care will be provided to that person absolutely free of cost. Till the person recovers completely, he would be under our support system.

Let us first talk about the entire game. Everyone is surprised as to why so many deaths are occurring? Why so many people are dying in Brazil, Spain, Italy and USA? Why the number of Corona cases in India is increasing? Why so many new cases are coming up everyday? There seems to be something wrong. Let me explain from the beginning. Whatever I am telling you is based on the evidences.

Let me explain from the scratch how a Corona patient is killed in three steps?

Step One

As soon as you get out of the house (in fact, some people even when at home), you put on the face mask thinking that you are protected.

What happens, as reported in a journal¹⁴, in an hour, we touch the mask 23 times on an average.

One tends to adjust the mask, on an average, 23 times in an hour. You go to a shop to buy vegetables putting on the mask. While you are talking to the vendor enquiring the rates, you continuously adjust the mask. Finally, you pick up a fruit let us say, a mango and don't find it up to the mark; you pick up another one; while you are selecting and deselecting the mangoes, your hand again and again goes to the mask, since you are finding it difficult to speak and you are feeling suffocated.

What I am trying to explain is an important thing. Your mouth does not contain only Coronavirus, there are so many types of viruses in your mouth. When you were not using the mask prior to the spread of Corona, on sneezing or coughing, the bacteria and viruses from your mouth used to go into the atmosphere and get killed due to fresh air and sunlight. Now, when you are wearing the mask, you are not letting those bacteria and viruses get killed as there is no fresh air or sunlight; you are, in fact, collecting them in the mask.

Face mask causes stagnation/collection of all kinds of viruses(including Coronavirus) and frequent touching of mask (23 times per hour) causes an increase in the transmission of virus meaning more illness and more deaths.

The first step here is that a healthy human being is sitting at home, away from the sunlight and fresh air; there is no physical activity. A number of people have lost their jobs in this Corona pandemic, so they are depressed; the children are not going to school so even they are depressed; all this is leading to bickering at home. As a result, our immunity gets lowered and whatever immunity we are left with, is lost as a result of the mask. Since you have been continuously

adjusting the mask, and touching the mangoes (which you don't buy finally because you don't like them), unintentionally you pass your virus to the mangoes. Another healthy person comes to the shop and buys those mangoes, thereby carrying your virus home (not necessarily Coronavirus, it could be any virus).

For this, I found out all the medical research papers pertaining to whether the mask protects us from virus, Influenza, common cold or not. I succeeded in getting three research papers which were related to the use of masks. One research paper talked about touching the mask 23 times in an hour. The research of other papers¹⁵ was about whether the use of mask alleviates or aggravates the infection. The conclusion of all these research papers was the same. That is, if you use a mask to protect yourself from a particular virus, that virus will increase. So, the first step or conspiracy is to make people sick; to lower their immunity. You are your own immunity. To lower the immunity, make a person sit at home out of fear. The number of times you make a phone call, or read the newspaper or listen to the news, fear will increase leading to the lowering of immunity by about 50%. The remaining immunity is being lowered by the use of masks. Let me ask, "How many times do you wash the mask in a month"? I am pretty sure you don't wash it at all or may be once. The collection of viruses in the mask lowers the immunity and brings it to the same level as the Indian economy currently is (on the verge of crash).

The point that I am trying to emphasize is that the virus, which otherwise would not have come to you, in the prevailing circumstances will come to you and if somebody else's virus comes to you, you would have fought against it in the normal circumstances because your immunity was strong but now with the weak immunity, an otherwise healthy person too would fall sick.

Step Two

Whenever the virus enters your body (because of the use of mask), it is quite obvious that the patient will have cold or cough or fever or some other symptoms. What will the person do in such a case? He will go to the hospital because if he goes to the chemist to buy a medicine for lowering the fever, he will not be given medicine; rather he would be advised to go to the hospital. If you go to the hospital, you will be coerced to undergo Corona test and it is most likely, the report would be positive. Why? This will be discussed later. What follows after being Corona positive, is step 2.

When you reach the hospital, the virus is still in your throat or the upper respiratory tract. Remember till the time the respiratory Influenza virus (Corona) is in the upper respiratory tract, there won't be any complications nor will the person get killed. Respiratory Influenza virus means it can enter the body through the mouth or nose. It remains in the upper respiratory tract for two days. You will catch cold so that the virus comes out or develop fever because at that time, the Coronavirus or for that matter, any virus starts disintegrating, starts getting destroyed and at this time, our immunity throws it out of the body. You will not develop any complications or breathing difficulty because the virus is in the upper respiratory tract and we breathe through the lungs. The virus will go down from the upper respiratory tract after two days if nothing is done to prevent its attack. Gradually, the virus will start going down on the third day onwards when you go to the doctor. The doctor will prescribe antibiotics, anti-pyretic, anti-malarial and anti-HIV medicines.

Coronavirus in upper respiratory tract (mouth, nose, throat) is not at all deadly and cannot cause complication or death.

Giving patients-

1. Antibiotics¹⁶
2. Antipyretic drugs¹⁷
3. Anti-viral drugs¹⁸
4. Anti -malarial drugs¹⁹

**Causes the virus to spread to the lower respiratory tract (Lungs).
By 7th day, it may cause breathing difficulties, Pneumonia like symptoms and oxygen deficiency in patients.**

Read *Gulf News*²⁰ of April 9, 2020. This is the reputed newspaper of the Gulf countries wherein my interview was published. The interview says:

“Check the WHO protocol and you will see it’s a combination of anti-malarial, antibiotics, anti-pyretics and even in cases a HIV drug. Why do you need antibiotics to treat what is essentially a viral fever? Even the dosage of anti-pyretic is also extremely high and it can often turn out to be a lethal combination.”

In many of my interviews, I have indicated that the reason for death is not Coronavirus but the medicines being administered in the name of Coronavirus thus resulting in the movement of the virus to the lungs (lower respiratory tract). All the medicines consumed lower the immunity, as a result the virus gets a chance to percolate down to the lungs. What is helping the virus to move from upper respiratory tract to the lower respiratory tract? Medicines. All this I have been saying since the month of February 2020 because it was happening in Wuhan at that time and it was occurring at other places as well. What was the result? My YouTube channel, Facebook page and Twitter account got deleted.

On June 1, 2020, WHO accepted in *The Guardian*²¹ that the overuse of antibiotics for Covid-19 will cause more deaths. What I said 2-3 months back is now being accepted by WHO that the reason for the

increased deaths is medicines when so many people have lost their lives, WHO is saying this. You must have noticed that recently the drug for malaria too has been banned because WHO said that it is the reason for increased deaths. The drug for HIV too was banned in the beginning of April for the same reason. WHO is saying all this when so many people have lost their lives? A common man like me also knows that if we intervene with the virus by taking medicines, it will attack the lungs.

Step Three

Once the virus reaches the lungs, fluid is filled up in the alveoli as a result, the patient starts having breathing difficulty. In such a scenario, if you measure the oxygen level with the help of Oximeter, it will be sometimes even less than 80%, which in normal course is 99%. The moment it is $< 90\%$, the doctor would advise you to go on ventilator- step three of murder or death.

See the below given Ventilator. How dangerous the mechanical ventilator looks. It appears that the mechanical ventilator is a life-

saving equipment. Let me tell you 94% people die on the ventilator²². 6% people, who come alive from the ventilator, half of them die within 2-3 months and those 3%, who survive are in a pathetic state i.e. they are dependent on others for their day to day needs. When a person is on ventilator, the ventilator functions as lungs; in such a case, the coordination between the brain and the lungs gets cut off.

What happens after this? When the lungs breathe, the brain does not recognise it and the motor activities such as brushing teeth, eating etc. are forgotten by the body. The person becomes a living corpse. What I am trying to say is that a mechanical ventilator is a trade with death; it is a journey towards death. Based on the evidence, I said 94% deaths occur on the ventilator but my friend, consultant, for N.I.C.E. Dr K B Tumane, Ex-Chief Doctor (Deputy Director Health Services) Nagpur Municipal Corporation, who is a chest specialist for the last 32 years and has been associated with patients suffering from grave diseases of the lungs like Pneumonia, Tuberculosis etc; patients who are in the last stages says that in his long medical career, he has never seen a patient coming alive from the ventilator meaning thereby 100% deaths occur on the ventilator. What he is saying, is practically seen by him.

Thus, the patient dies in three steps. Step one is completed by the mask. Step two is completed when you go the hospital and take medicines and step three is completed by putting the patient on the ventilator.

All over the world, so many deaths are occurring because the protocol is the same (all three steps towards death). Same is the case in India. But India has less number of ventilators so some people are lucky that they do not get admission to the hospital and as a result, they don't get the ventilators and by God's grace, they are saved from death in spite of the doctors and in spite of the treatment. When people ask the reason for the large number

of deaths in Brazil or the USA, I got in touch with my network of doctors across the world (from whom I get authentic information) and concluded that whichever country follows the above three steps (Mask, Medicine and Ventilator), the number of deaths is more. In countries like Vietnam (where I have been running my center for the last eight years), Cambodia etc the total number of deaths is zero; in Tanzania, it is 21 deaths out of a total population of six crores; even in Qatar (where I have a large number of patients), the protocol is that people are advised to take rest, keep themselves hydrated and are confined to one room. The entire city or town or the society or the building is not quarantined.

There, whenever a person suffers from Corona, he is isolated (as in any infectious disease) and the rest of the work goes on. The point that I am trying to emphasise is that it is not such a virus, which if attacks, will spread to all.

Since people die in three steps, it is a joint responsibility on our part (both you and me) to save them from death and give them the right knowledge. Right knowledge means if at all the virus enters the body, it should not go beyond the upper respiratory tract. If you succeed in doing this, I assure you that the patient won't die of Corona. Remember we all are born to die, but we won't embrace death by becoming a victim of any disease (here Corona).

What is the solution? This is very important. 60 % of the people in the world are already immune to novel Coronavirus or SARS-CoV-2 the new virus - as if they are already vaccinated against Corona. Despite the absence of the vaccine, they are immune. Research paper of May 14, 2020 in *Cell*²³ - a reputed and highly regarded journal, says that 60% of the people in the world are immune to Coronavirus. The researchers found that the viruses like the Hong Kong Coronavirus in 2005, the Netherland Coronavirus in 2004 or 229E the US Coronavirus in 1965- all these viruses have

given us cold and fever several times; as a result, a type of immunity is developed in our body and this immunity is called Background immunity. 60% of people in the world are having **background immunity**.

Cellular background Immunity: Up to 60% of the population has cellular background immunity to novel Coronavirus as they have been infected with the previous Coronaviruses (cold virus) since childhood.

What about the remaining 40%. They have another type of immunity called **Herd immunity**. In any country or community for that matter, if 60-70% of the population becomes immune, the rest of the population becomes safe. This is due to **Herd immunity**. The day Coronavirus came to light, we (60%) were covered with **Background immunity** and the remaining 40% got covered with **Herd immunity**. Thus, this world is already being protected from novel Coronavirus from the time it entered our country.

Herd Immunity: Since 60% of the population is already having background immunity, rest 40% may get covered partially under herd immunity. Because of it, global case fatality ratio is 0.1% i.e. equal to the seasonal Flu.

How would you recover? Most of our population already has background immunity as well as herd immunity. There is a third type of immunity called **Mucosal immunity**- immunity related to mucus- called a “Chipchipa Padharth” in Ayurveda. Our body is lined with mucus right from the mouth itself. As soon as the virus enters the body, it confronts mucosal immunity at first. If you strengthen your mucosal immunity, you need not worry about respiratory virus. How can you strengthen mucosal immunity? By consuming 0.2 gm Vitamin C²⁴. Vitamin C should be taken not in tablet form but by consuming fruit and vegetables- 2 mangoes /

2 sweet limes / 4 tomatoes / a handful of raw peas/different types of fruits (300-400 gm) all give 0.2 gm vitamin C. A vitamin tablet taken goes directly into the stomach whereas the fruits and vegetables consumed orally go to the body through mouth and strengthen the mucosal immunity. Whenever you take a tablet, any tablet for that matter, your mucosal immunity is reduced.

Mucosal Immunity: Everyday consume at least 0.2 gm of vitamin C from fruits (3 mangoes, 2 oranges or 1 guava) raw vegetables (4 tomatoes or a handful of peas) to prevent the attack of respiratory viruses.

Step One

You have three types of immunity; background immunity, herd immunity and mucosal immunity. Strengthen them by consuming 0.2 gm vitamin C, by avoiding the intake of medicines (as they lower the immunity) and reduce (in fact completely avoid) the intake of animal protein (any food derived from animals) such as mutton, chicken, fish, egg, dairy products-milk, curd, butter milk etc. Animal protein reduces mucosal immunity. Despite these three types of immunity, the virus enters the body because the person is on medicines or consuming animal protein, and the person falls sick.

Step Two

As soon as the first sign of Flu like symptoms such as feeling feverish, headache, body ache, cold or cough occur, immediately follow the three days protocol (which I have been prescribing to my patients since 2016).

With the first symptom of Flu (fever, cough, body ache, weakness)

follow the three step Flu diet.²⁵

The three step Flu diet works and is based on the evidence from more than 167 research papers from the last 100 years.²⁶

Day 1 (Liquid)

Consume citrus fruit juice and coconut water in the quantity specified below:

Your Body Weight (kg)/10 glasses of fresh citrus fruit juice + Body Weight (kg)/10 glasses of coconut water

Let us say the body weight is 60 kg so $60/10 = 6$ glasses of citrus fruit juice and 6 glasses of coconut water.

Don't consume packed juice instead have fresh juice and take it without sieving. Take juice and coconut water alternately every hour, sip by sip, spending at least 15 minutes on each glass. This will keep the temperature under control. Vitamin C in citrus fruit juice supports the immunity and helps in getting rid of the virus. Coconut water helps in hydration. It is the best mineral water in the world made by God.

Day 2 (Fluid)

Consume citrus fruit juice and coconut water

Body Weight (kg) /20 glasses of citrus fruit juice + Body Weight (kg) /20 glasses of coconut water

+

Your Body Weight (kg) × 5 gm of cucumber and tomatoes.

Let us say the body weight is 60 kg so $60/20 = 3$ glasses of citrus fruit juice and 3 glasses of coconut water

And $60 \times 5 = 300$ gm of cucumber and tomatoes

You will be surprised to see that by the end of Day 2, you start feeling better and your temperature is under control. You would have regained some strength.

Day 3 (Solid)

For breakfast, consume

Body Weight (kg)/30 glasses of citrus fruit juice + Body Weight (kg)/30 glasses of coconut water

If your body weight is 60 kg so $60/30 = 2$ glasses of citrus fruit juice and 2 glasses of coconut water.

For lunch, consume

Your Body Weight (kg) \times 5 gm of cucumber and tomatoes

If your body weight is 60 kg, so $60 \times 5 = 300$ gm of cucumber and tomatoes

By evening, you will be surprised to find yourself fit. You can have normal home cooked food with less oil, less salt leaving animal protein for dinner.

If you follow this simple diet, you would be back to work on the fourth day.

Step Three

Usually, people try to manage the Flu with medicines and sometimes, there are chances for the virus to move down from the upper respiratory tract to the lower respiratory tract. As a result, breathing difficulty occurs and if checked with Oximeter, the oxygen level comes out to be $\leq 90\%$. In such a situation, the doctor advises a ventilator because the lungs are full of water. What you have to do in such a situation is avoid going to the hospital because

you would be put on mechanical ventilator. You have to make your own ventilator at home. This is called Prone ventilation²⁷. In the later chapter, I will tell you about Prone Ventilation.

The N.I .C.E INITIATIVE

With the first sign of Flu, contact us at www.biswaroop.com/nice or call us at 8587059169 for free support, guidance and treatment. It is an absolutely free service.

Thereafter, immediately our network of people will contact the patient and guide him. We will be with the person till he comes out of the web of Corona/Flu/Influenza.

The Science of Prana-Yamraaj

(Based on the lecture delivered on June 21, 2020-International Yoga Day)

What is SARS-CoV-2?

SARS-CoV-2 is an RNA respiratory Influenza virus. RNA respiratory influenza virus means that it can enter the human body through mouth and nose only. It is an RNA Influenza virus meaning that there can be no medicine or vaccine for the same. The reason for this is that it mutates very easily and quickly. Recently on May 5, 2020, University College of London conducted a study²⁸ of this virus on 7500 people and came to realize that the virus had already mutated 198 times by then.

Thus it can very safely be said that ever since the virus started spreading from Wuhan, it must have already mutated thousands of times (even though, there is no evidence to prove that the virus did not exist before Wuhan, as explained in the first chapter). Mutation means that it keeps changing its form like an impersonator and that it cannot be found in the same state next time when we reach out for it. Hence, for such viruses which mutate so fast, there can be no medicine or vaccine.

Let's take an example:

If a wild boar comes running towards you and you pick up a weapon to kill it but, as soon as you pick up the weapon, the boar turns into a mosquito. Now, that weapon cannot be used to kill the mosquito. As soon as the weapon is changed, the mosquito turns into an elephant. A mutant virus is of similar type. It keeps changing its form. Hence,

this RNA Influenza virus is also of mutant type. When 7500 people were tested, it was found that the virus had already mutated 198 times. If a larger sample is collected, then, we would find that the virus has mutated thousands and lakhs of times. Thus it is clear that if some virus is prone to excessive mutation, no medicine or vaccine can be created for it. By the time the medicine is created, it would be into some other form.

Secondly, nobody can die due to Coronavirus infection. The reason for this is very simple. This virus enters the body through the mouth and the nose. Till the time it is in the upper respiratory tract, there can be no complications or harm. After 4-5 days, it reaches the lower respiratory tract, where it can cause Pneumonia, ARDS (Acute Respiratory Distress Syndrome) or even cardiac injury. Plenty of people have succumbed to Covid-19 infection which occurs only when the virus moves to the lower respiratory tract.

Why does the virus come down to lower respiratory tract? I have explained it earlier also that in case you suffer from Covid-19 infection, Flu or Influenza and at such a time, if you take medicine like any antibiotic, antipyretic, anti -malaria, anti- HIV or any other medicine for that matter, it directly or indirectly compromises with your immunity and the virus gets an opportunity to travel from the upper respiratory tract to the lower respiratory tract. This can lead to Pneumonia or any other breathing problem. At such a time, conventionally, the first thing is administering of oxygen and next comes the mechanical ventilator. People feel that if they are put on the ventilator, they will survive but let me tell you that the ventilator has a failure ratio of up to 94%. This mechanical machine, which is called the ventilator, is actually a bane for humanity because the pipe which goes through the throat down to the lungs and tries to pump oxygen, at that moment, the connection between the brain and the lungs is snapped. The patient, who is put on the ventilator,

finally has difficulty in coordinating the brain with the actions of the body and therefore, we see him in the conditions which are so disturbing.

Let me remind you that today is International Yoga Day and yoga is something which we Indians have given to the world and this asana that is Pranayam- the breathing exercise-shows the connection between the lungs and the brain. It is the lungs which control the breathing and when this connection between the brain and the lungs is snapped, then the mind-body coordination is ruined. At that moment, the patient is alive but like a dead body. The breathing is on but the brain does not know who he is. This is what is done by the mechanical ventilator.

Hence, people who survive on ventilator, are actually living corpses. So, the ventilator is not a boon for humanity. You would very well understand this if you have met a person or a patient who was ever put on a ventilator.

Today, if somebody has tested positive for Coronavirus and he goes to the hospital the charges for the bed in the hospital range from Rs 3-4 or even Rs 5 lakhs. It might even range to Rs 25 lakhs which might (for some) mean the entire earning of their lives. Imagine your entire earnings for just one bed in the hospital. Let me now ask a valid question-What do you get out of that bed in the hospital? If there is no medicine for Coronavirus, no vaccine then, what is the point in getting admitted to the hospitals and spending 7 to 10 lakhs? One must ask oneself, “What is it that the doctor is going to treat me with?”, as till date, there isn't any medicine or vaccine or machine which can help the Covid-19 patients. The hospitals have nothing which can increase the chances of survival even by a fraction. In addition, they do have certain things which might enhance the chances of death.

Let me now assure you that it is actually very simple to be cured of this virus especially with the three day Flu diet for SARS-CoV-2 is a harmless Flu virus and is rarely fatal. People generally question why so many deaths are reported in India? The answer is quite straight forward. Rather than Corona being the culprit, the real contributor to the death toll is the treatment protocol by the WHO (as explained earlier) and the change in guidelines of “reporting death” by ICMR.

ICMR recently issued guidelines that if anybody died on the Indian soil and was suffering from breathing difficulty or had cardiac injury then that would be considered death due to Coronavirus even if he or she tested negative for Corona. Now, can you tell me about anyone who would not be having breathing difficulty or cardiac injury at the time of death? Whenever a person dies, two things are always there: one is breathing difficulty and another one is cardiac problem i.e. the heart stops and the breathing stops. Both these conditions were cited by ICMR to be considered as Corona deaths. Also, in accordance to the changed guidelines, if a patient died of accident and also tested Corona positive, it is to be considered as death due to Coronavirus. Thus the deaths in India include all these patients as well. Honestly speaking, no one knows correctly how many patients really died of Coronavirus. My personal experience with Coronavirus patients is that if you give such a person comfort and keep the patient hydrated, then Coronavirus would vanish in 3 to 5 days. It is just like any other Flu.

It is not difficult to predict the behaviour of the newly discovered SARS-CoV-2 (however, it may be infecting humans since eternity), as four other Coronaviruses (229E, NL63, OC43, HKU1) were already known to human beings for several years and also statistically about 10% of the Flu, which we suffered in our lifetime, is the result of the invasion of one of the above kind of Coronaviruses and each time we get cured, without much effort and attention, in just a span of three to seven days.

Let us say somebody wants to eat a mango. The mango has the same features be it any part of the world. They might vary in size, shape and taste but the basic things would be the same. Similarly, this Covid-19 is essentially the same as the other four viruses. The fatality rate and the means of transmission would basically remain the same. Thus, we can conclude that even this virus would be similar in behaviour to the other four, so there is nothing to fear about.

Let us look at the example of Vietnam where I have been practising for the last seven years. Coronavirus had reached Vietnam much before it reached India and let me tell you that the number of deaths in Vietnam due to Coronavirus is zero. No one died in Vietnam due to Coronavirus. I asked my Vietnamese colleagues about the zero Corona deaths in Vietnam. The answer that they gave was, “Our country does not experiment with drugs on human beings. We just advise the patients to take complete rest and they soon recover.”

Vietnam has a population of about 15-16 crore and still it has no deaths whereas in India, the entire economy is shattered and the people are living under the scare of Corona. On the occasion of International Yoga Day, it is quite unfortunate (since it is solar eclipse also) the newspaper headlines have flashed the launch of ‘Fabi Flu’. This drug is an experimental drug and there is no explanation of what harm it would do once it reaches the body. None of the countries including US, UK and Japan (where it was developed in 2014) have approved of it but India has approved of it as an experimental drug. The launch of this drug may, God forbid, announce a total eclipse for India.

Whenever a new medicine is launched in the market, there is some reference or clinical trial to decide that this medicine will be beneficial for a particular ailment. When I tried to find the clinical trial reference of Fabi Flu (Favipiravir), I got just one trial and that

too, had come from China a few months back. On the one hand, we are boycotting Chinese goods and people are being motivated not to use Chinese products and on the other hand, the trial from China is considered as a reference for launching this medicine. I studied this trial wherein 80 patients were involved; 35 patients were given Favipiravir medicine, which is launched by the name-Fabi Flu. 45 people were given another medicine named Lopinavir and Ritonavir. These two are the failed drugs of HIV which were given to the patients in the name of Corona. These drugs were banned when the number of deaths started increasing. So the banned drugs are being compared to this new medicine Fabi Flu. This is similar to a cunning boy who fails in the class. He gets only 20 marks but wants to inform his parents that he has got very good marks so he brings home another child who got just 10 marks. He wants to tell his parents that my marks may be bad but there is someone whose marks are worse. In the same fashion, this trial proves that this medicine is better than Lopinavir and Ritonavir. It does not show that this medicine can cure a Corona patient. A careful study of this trial shows that it is neither a randomized control trial nor a double blinded trial. People who conducted the trial chose and decided to keep the patients in this category of medicine (Fabi Flu) or that (Lopinavir and Ritonavir). The 35 patients of Fabi Flu category were thin, young, less sick and their temperature was lower in comparison to the patients of the other group. Some of them were even asymptomatic. Thus, the seriously ill Covid-19 patients were excluded, so it cannot be considered a real trial.

In order to know the truth of this medicine, have a look at this manual²⁹ which I have taken from the Ministry of Health, Labour and Welfare, Japan dated March 4, 2014, when Fabi Flu was made. Read this manual and you would get to know the entire truth. On Page 56 of this manual, it is written that this medicine was tried on 12 puppies, out of which nine puppies died in a few days. Then, the medicine was tried on three monkeys; one monkey died in a few

days. After this, the medicine was tried on some rats. As a result, the male rats got testes toxicity meaning they became infertile or impotent. The female rats lost their ability to produce young ones. Thus, either still born children were being produced or they were being born with genetic defects. Such medicines are assigned a special category referred to as teratogenic drugs. How harmful are teratogenic drugs, I will explain by referring to an article in the *New York Times*³⁰ of May 6, 2020. The article says that this medicine (Fabi Flu) can be compared to another teratogenic drug called Thalidomide launched in 1950 in some European nations. The side effects of this drug were that 1,23,000 children were still born. Those who were born alive suffered from deformities of various kinds. (See picture)

There are around 24000 such children who are still living with those disabilities. Thus this medicine was soon banned. Similar condition may arise with this drug i.e. 'Fabi Flu'. The side effects would be known after some years. The newspapers and the drug companies might hide the side effects but they will be out very soon when the children are born.

Fabi Flu in India

Let us discuss Fabi Flu in the Indian context. On June 20, 2020, when this medicine was launched in India, the newspapers and TV revealed its price as INR 103. People think by consuming medicine worth INR 103, they will recover from Corona. The truth is that the full strip of medicine (containing 34 tablets) is to be consumed on the very first day. In 14 days, 7-8 such strips of medicines are to be consumed, meaning thereby one has to consume tablets worth INR 25000 in 14 days to recover. The recovery will be only for those people who are already fine (asymptomatic). What will be its effect on the seriously ill patients is not known.

If you buy this medicine, you need to fill up a form, inserted inside the box. You need to sign this form. The form says that you have well understood the side effects of this medicine and you yourself are responsible for the side effects; no one else. After consuming the medicine, how it affects, that data will be taken by the company, compiled and put in the next edition of the report just as this report explains the effect of this medicine on puppies, monkeys and rats.

The next report of this medicine is very likely to describe its effect on the Indians. This is known as human guinea pig. Human trial and human guinea pig are two different things. Human trial means that a person has given consent to become a part of the trial (for his vested interests- may be for financial gains). Such people get

INR10-15 lakh. The person becomes willing to take a chance. This is known as volunteer for human trial. The other is guinea pig which means that you buy these medicines for INR 25000 and become a part of the trial. You will become like the puppies or monkeys or rats. This is called human guinea pig.

The trial pertaining to how this medicine will work on Corona patients, never took place. Only comparison was made that this medicine better than the other two medicines as it was tried on almost asymptomatic patients.

I suggest, download the manual (consisting of 172 pages) of this medicine and read it thoroughly. Then go to any doctor or health specialist and ask him if any near and dear one in his family (may be his kid/ wife/ parents) or even he himself gets Covid-19, will he prescribe this medicine?

As stated earlier, Coronavirus is an RNA respiratory Influenza virus and it mutates fast so there can be no drug for the same. This drug, which is available in the market, brings about genetic changes. It genetically changes or mutates the RNA of the body. Putting it simply, you become an entirely different person although the body remains the same; in other words, it shakes the foundations of the human body so in the near future, there are chances that the person might suffer from autoimmune diseases or Cancer or tumour. This might not happen to you but to the forthcoming generations. What all can it possibly do is shown to you through the photographs on the previous page. So be careful while you take this drug. It is not that the regulating authorities do not know about this drug; none of the countries have launched it commercially except India. The Indian economy has already been paralyzed and now schemes are on to paralyze the citizens of India.

On the occasion of the International Yoga Day, let's talk of yoga. Pranayam is an important exercise in which oxygen reaches those

parts of body (where it normally doesn't) through the medium of short breaths or longer deep ones. This leads to curing of or prevention of the diseases like Cancer, Diabetes and other such ailments. Plenty of people in and around the world follow yogic exercises specially Pranayam. I can safely say that Pranayam or breathing exercise alone is one holistic cure. If we do the reverse of it, that is, if we, instead of allowing oxygen to reach the cells of the body, make carbon dioxide reach them, then, what would happen and if this process continues for long hours and on daily basis, then of course, one would say that the reverse would be true. If this is followed then, all those diseases like Cancer, Diabetes, Hypertension, Blood Pressure, cardiac diseases etc would also increase. These are the long term effects. What about the short-term problems? It will cause headaches, feeling of fever, loss of immunity etc.

To convey a message, I have found a new method that is- this is a placard which reads 'Pranayam' and I wear a mask which writes 'Raj' together it makes "Prana-yamraj".

There is a need to understand this clearly. When we wear a mask and we keep breathing, we actually are taking in the carbon dioxide that we ourselves are releasing and it is being done continuously. Those who are healthy would experience the side effects in about an hour or two and those who suffer from co-morbidity will experience this quickly say in about half an hour. Actually, we are opening a channel to reach the Yamraj- God of death.

Look at the report³⁰ of CDC dated June 10, 2020 (CDC is Centre of Disease Control). They have accepted in this report that if we wear a face mask for more than one hour, it will have physiological effects on the wearer since we take in the carbon dioxide which we ourselves release. It may lead to problems like headache, increased pressure inside the skull, changes in the nervous system, increased breathing frequency, cardiovascular effects, reduced tolerance to lighter workloads etc. I have been emphasising this for the past so many months, and now CDC has accepted it but it is quite unfortunate that our government is not paying any heed to it.

It is noticed from the calls of the patients received in the past few days, that they have complaints of headache, breathing problems and they suspect that they have acquired Coronavirus. I basically tell them to remove their masks and breathe comfortably for 4-5 hours and believe me, they start feeling better. It is important to understand- from where has this 'mask theory' come in. It has basically reached us from the surgeons. While operating, they generally use the masks. We must get into the real scenario whether wearing of mask really helps the surgeon? This culture of wearing masks is 130 years old. There is basically a tradition to wear the mask while performing surgeries and it is strictly followed by the surgeons but whether it is helpful or not is doubtful.

A meta-analysis³¹ was done by Cochrane Collaboration. They analysed all the researches made on the simple question whether

wearing the mask during surgery is beneficial or performing surgery without the mask is also equally good. This organisation is an unbiased organisation and it never takes donations from any pharmaceutical companies but keeps bringing out the truth. The Cochrane Collaboration continuously researched to find out whether it is beneficial for the surgeons to perform surgeries wearing the mask or is it not beneficial. They gathered all the randomised control trials and came to the conclusion that by wearing the mask, the chances of infection will not be lessened rather they will be increased. Infection does not come down by wearing the mask even during surgeries.

How is the chance of infection increased by wearing the masks?

When we wear a mask and breathe into it then the area (which is covering the nose and the mouth) has the same temperature as our body. Along with this, as we are speaking and breathing at the same moment, this area becomes a little moist or humid. Two things that need to be focussed on here are that this area gets a little warm as well as humid. Humidity and warmth are very conducive atmosphere for germs, bacteria and other infections to flourish. If you wear a mask for half an hour to one hour continuously then, the atmosphere created at this juncture becomes very conducive for the prosperity and growth of infections and germs. The report³² of the journal-*J. Orthop Translate* of the year 2018 writes about-‘Surgical masks as a source of bacterial contamination during operative procedures.’

Thus, by wearing the mask the chances of infection do not decrease rather they increase. The wearing of masks leads to another disease in the human body called ‘Hypercapnia’³³ which is the condition where our body has more of carbon dioxide than required. Just as Pranayam means filling the body with oxygen, the reverse of it is

Hypercapnia - that is filling the body with carbon dioxide.

“Hypercapnia alters expression of immune response, nucleosome assembly and lipid metabolism genes in differentiated human bronchial epithelial cells.”

-Scientific Reports 2018

The question arises where did this idea of wearing a mask evolve from? It evolved 130 years ago but who is the person who got this idea of making a mask? It came to light that there was a surgeon named Dr Joseph Lister. He was a surgeon in 1880s and was of the opinion that if we wear a mask, we would be safe from infections. Almost all of us are aware of Listerine mouthwash. This product is based on the name of Dr Joseph Lister. Many of us use it as a mouthwash to kill the bad bacteria or viruses in the mouth. It has high alcohol content so the reality is that it does not just kills the harmful bacteria but also the beneficial bacteria which boost our mucosal immunity.

“The role of alcohol in oral carcinogenesis with particular reference to alcohol containing mouthwashes”

-Australian Dental Journal, 2008

Australian Dental Journal of 2008 published a report³⁴ saying it causes Cancer. Both these ideas i.e. one of wearing the mask and the other of using mouthwashes (alcohol- based mouthwashes) evolved from the same person-Dr Joseph Lister.

We are surrounded by bacteria and viruses and millions of them live inside our body. We live in harmony with them. To throw out the bad bacteria or viruses or any other infection from the body is the duty of our immune system. This immunity exists everywhere- in the mouth, skin and everywhere else. We kill the immunity in our mouth by the use of alcohol- based mouthwashes and we kill the immunity of our hands by using alcohol -based sanitizers. The

truth is that both mouthwashes and hand washes are the same because the ingredients of both are almost the same and both of them are cancerous. They are the substances which actually depress the immunity and while we require immunity to fight for our safety, these are the products which lower it. Remember that those people who are trying to promote sanitizers and mouthwashes or even over cleanliness are actually promoting Cancer.

What needs to be done? The solution

'N.I.C.E' - is a network of Influenza Care Experts in which we have about 200 experts from around the country. We often encounter patients with complaints of feverishness, headache or weakness; they might be suffering from Flu or Coronavirus or even Influenza but the basic reason can also be that they have worn the mask for a longer time. Let's perform an experiment. Take an Oximeter and check your oxygen level and your pulse rate. After checking these two things, wear your mask for about an hour and then once again, check your oxygen level and pulse rate. You will find that your pulse rate has increased by 5 or 7 units. It means that wearing the mask directly affects your heart and therefore, the pulse rate increases. What is the effect of mask on oxygen level? If a person wears the mask for half an hour, the oxygen level reduces by 1%. This is confirmed through the research paper³⁵ published in *Neurocirugia* in 2008. You can always perform the experiment yourself and find out the result.

In our vicinity, we have so many health workers, policemen, shopkeepers etc and other people who, because of their duty, have to continuously wear masks for long hours. If they do not wear the masks, they will be fined for non-compliance. When such people contact us and tell us that they have symptoms like headache, fever,

weakness and breathing problems, the same symptoms as that of Covid-19, We ask them to remove the masks, we know that wearing of mask also leads to the same problems. Diagnosis of such patients show- low oxygen saturation level, increase in pulse rate and temperature. The low saturation level of oxygen in such patients can lead to Pneumonia, due to increased pulse rate; they can suffer cardiac injury and due to high temperature, they can feel feverish and weak. Although the temperature increases only by half a degree but that half degree will remain in the increased position for longer durations, which can be highly risky.

SYMPTOM	COVID-19	MASK
Headache	✓	✓
Breathing difficulty	✓	✓
Weakness	✓	✓
DIAGNOSIS		
Oxygen	↓	↓
Pulse	↑	↑
Temperature	↑	↑

Here I would like to reiterate the fact that wearing the mask and breathing into it leads to about half a degree increase in the body temperature. Here the relation is with the thermoregulation of the body. ‘Face mask impact on human thermoregulation’, this article is recently published in *The Annals of Occupational Hygiene 2020*. On reading the article³⁶, you will understand that the brain, which

regulates the entire body temperature, gets disturbed because of wearing the mask; as a result, the temperature of the body increases by up to half a degree. Although, half a degree is a very mild increase but it remains like this for a longer duration of time. This long-standing increase can be quite dangerous for the human body. If you have Flu like symptoms, they may not be the symptoms of Coronavirus or Influenza; in fact, they are due to the lack of oxygen in your body.

In case you have certain patients around you who have Covid-19 like symptoms, you can tell them that these symptoms can be because of wearing the mask or you may even suggest them the three step Flu diet which has been explained earlier in the book. If they are still not confident, you can connect them to us through our helpline number. Those people who are MBBS doctors or BHMS or BMS or even Health Care workers, I invite you to support us and help us by joining N.I.C.E.

You can join us on our website www.biswaroop.com/expert. I will provide you special training as to how to handle Influenza/ Covid-19 patients. With your background knowledge, you can be a part of this network and we can together help people recover from Covid-19 /Flu.

Emergency Management of ILI/ Covid-19

(Based on “The Training for N.I.C.E. Practitioners”
held on June 29, 2020)

Emergency Management of ILI/ Covid-19

- 1) Breathing Management**
- 2) Cough Management**
- 3) Fever Management**
- 4) Vomiting**
- 5) Nausea**
- 6) Extreme Weakness**
- 7) Loose Motion**

The most important thing while managing the Flu/Influenza/ILI/ Covid-19 is managing the following symptoms like breathing, cough, fever, vomiting, nausea and extreme weakness. In such a situation, the patients might panic; we need to remind them that they need to keep some patience; that is why they are called patients. We need to ask them only two things: the temperature and the SpO₂ i.e. the oxygen level using Oximeter. As long as the temperature is $\leq 102^{\circ}\text{F}$, it is okay. If the oxygen level is $\geq 88\%$, then it is comfortable.

Let's start with breathing management. Breathing management means the person is finding difficulty in breathing. For such a person, we think of oxygen in the hospital set up. If the breathing difficulty persists, then we think of mechanical ventilator. Oxygen cylinder or oxygen therapy is the worst fraud in the medical industry. Why? Because your body is not designed to take in pure oxygen. Your

body is designed to inhale air which has only 21% oxygen and the rest are nitrogen and other gases. This is an important thing, which you should keep in mind.

For example, you have a petrol or a diesel car. Instead of petrol or diesel, you put more purified and more expensive fuel that is, the jet fuel, do you think the car will run? The answer is no. Your car is designed for petrol/diesel. Even if you put superior kind of fuel, it is not going to work. The engine will be damaged. Similarly, your body is not designed to inhale oxygen for a long time or even for a minute. It is going to damage your body. The very thought that oxygen therapy can help a person to reduce the mortality/morbidity, is untrue. Ever since the oxygen therapy was introduced in this world, there has not been even a single evidence, which shows that oxygen therapy can increase the life expectancy or it can help save a person's life. No doubt, on providing oxygen therapy, a person may get initial comfort but if you think it is going to increase your life span, it is going to help reduce the morbidity; it is going to help cure the disease, there is no evidence.

I am going to show you the evidence and then you would believe- that is Cochrane Systematic Review-one evidence that I trust the most and I often talk about. Cochrane is an organisation which does not take any donation from any pharmaceutical company. They did a meta analysis³⁷- the highest of all kinds of analyses. According to Cochrane, two groups of people were taken-one was given higher concentration of oxygen and the other was given lower concentration of oxygen. Those who were given higher concentration suffered more harm; those who received lower concentration suffered less harm. So lower concentration of oxygen is better.

Higher v/s Lower Oxygen

Higher versus lower fraction of inspired oxygen or targets of arterial oxygenation for adults admitted to the intensive care unit

**Cochrane Systematic Review –
27 November 2019**

If you ask a question oxygen, or no oxygen – which is better? No oxygen is better than some oxygen. Here is the reference³⁸. In the hospital set up, there is an oxygen cylinder which can provide some initial comfort but the same thing you can achieve at home with a hand held fan. The trick is very simple. A hand held fan is available in almost every home. You just have to hold it in front of the nose of the patient. Switch on the fan and the fan will throw air into the nose of the patient. If the patient can hold the fan in front of his nose for 5 minutes (see pic), he will get the same kind of comfort which he might have received with oxygen therapy in the hospital. This will be without the side effects of oxygen which causes oxygen toxicity in the body. A hand held fan is much better than oxygen therapy.

Relieving Breathlessness with Hand Held - Fan

**European Respiratory Journal 2017 50: 1701383;
DOI: 10.1183/13993003.01383-2017**

Lancet is one among the top five journals. If an article is published in *Lancet*, it is considered as a highly regarded research paper. It is a double-blind randomized controlled trial and here the researchers compared two groups of people who were suffering from breathlessness of similar kind of intensity. One group was given oxygen and the second one was given a fan like this and asked to hold it six inches away from their nose. They were asked to breathe through the air of the fan. Both the groups of people got the same kind of comfort after 5 minutes of these therapies. Thus it is clearly established that this fan can do the same job as an oxygen cylinder. This fan is much cheaper (costing nearly Rs 200) than the oxygen cylinder which is not available at home and for which, we are dependent on the hospital.

Oxygen v/s Room Air in Breathlessness

Effect of palliative oxygen versus medical (room) air in relieving breathlessness in patients with refractory dyspnoea: a double-blind randomized controlled trial

Cochrane Systematic Review – 27 November 2019

The hospital authorities would never say that this fan is better than the oxygen cylinder for fear of their business being severely affected. So for 95% of the patients, who complain of breathlessness, if you ask them to hold the fan like this and sit in this posture (by leaning a little forward and then holding the fan six inches away from their nose), they will get the same comfort as they would have got from the oxygen cylinder. There is no upper limit and they can hold the fan till they get comfort. This is a very important therapy; it is widely written in the medical journals but never shared with the general public. Once it is shared with the general public, they

would know that they don't require oxygen cylinder at all. By doing this, you would succeed in solving 95% of your patient's problems.

There are remaining 5% people, who would not get relief despite holding the fan even for half an hour or more. They are the patients who may have the real problem. At this point of time, you could check their SpO2 i.e. oxygen saturation level with the help of Oximeter. If the reading is $\leq 88\%$, that means it is a real problem-uncontrolled breathlessness -it means it is real emergency and in hospital set up, they are asked to go for mechanical ventilator. What is mechanical ventilator and what is its alternate? The alternative will not provide the same results as mechanical ventilator but far better results than the mechanical ventilator.

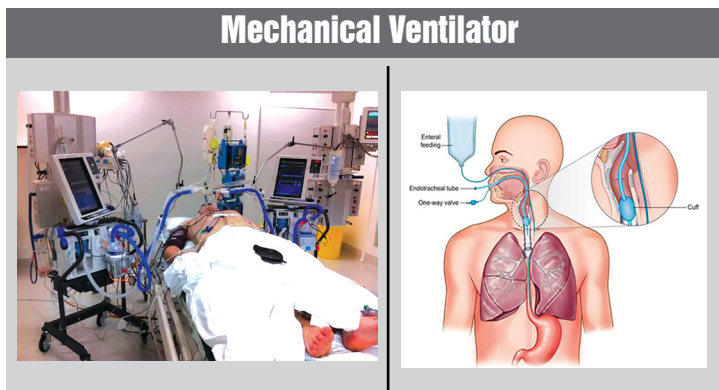

Breathing (Emergency Management)	
Hospital	Home
Oxygen Cylinder ↓ Mechanical Ventilators	Hand Held Fan ↓ Prone Ventilators

Put the patient on prone ventilation for half an hour and again check the SpO2 and you will find it $\geq 90\%$ and the patient will also start feeling better.

Before focusing on prone ventilation, let me tell you why to avoid mechanical ventilator.

The mechanical ventilator- something very huge, looks very scientific, something very promising, something very glamorous in a way that it is very expensive and not everyone can afford and this is a status symbol of the hospital- a person feels that it is something as modern as this- the hospital has more capacity of saving a person- but this is all glamour.

A ventilator simply means a pipe goes from your nose and mouth to the lungs and stomach. Here the feeding is done through the pipe in the nose and air goes to the lungs through the mouth. This means the person is totally dependent on the pipes as shown in the figure.

Put on ventilator, 9 in 10 Covid-19 patients die

April 23, 2020

Live Science

When too many pipes go into the body, they give rise to many ailments. It is seen that nine out of ten Covid-19 patients, who are put on the ventilator never come back from the ventilator. They die. One patient survives not because of the ventilator but he survives in spite of being put on the ventilator. So, the patient may be lucky or extremely unlucky. Unlucky because staying on the ventilator is very painful; secondly, those who come out are in a pathetic state and die within next 2-3 months and still those who survive are paralyzed till death relieves them. Why is it so?

Side Effects of Mechanical Ventilator

When the patients are on the ventilator, they get VALI (Ventilator Associated Lung Injury) i.e. through the ventilator, the oxygen is forced on the lungs at a particular speed. Since our body is not designed to take the stream of oxygen at any speed, it immediately damages the lungs, which were already compromised at the first place. Secondly, putting on the ventilator causes oxygen toxicity. As stated earlier, our body is not designed to take in pure oxygen but through ventilator the oxygen is given in pure form. The speed and the purity of oxygen together cause neuro damage. The brain and the lungs, which are in tune with each other and work in harmony with each other, lose the connection with each other after the person is put on the ventilator. As a result, the person loses his memory and cannot perform simple skills like brushing teeth, going to the toilet, eating food, holding the glass etc. He becomes like a small child and needs to relearn all these skills. In extreme cases, the person suffers from VAP (Ventilator Associated Pneumonia). Try to understand this. When a number of pipes go into your body, the bacteria and virus travel through the pipe and occupy a place in the inner part of the lungs. This is called Ventilator Associated Pneumonia and when the person dies, he dies of Pneumonia and not of Influenza

or Covid-19 but unfortunately, it is categorised as Corona death. Thus these are the ailments a patient is destined to get when put on a mechanical ventilator.

Role of Bacteria as a cause of death in Pandemic Influenza

**J Infect Dis. 2018 October 1; 198(7): 962-970. doi:
10.1086/591708**

The Solution: Prone Ventilation

Whenever a person is hospitalised and is on medication or ventilator and dies, the death is not due to Pneumonia caused by virus but Pneumonia caused due to bacteria. The virus makes way for the bacteria. What I am trying to emphasise is that if the virus stays in the body for longer periods, it makes way for the bacteria especially through the ventilator. The bacteria travel through the pipes and go to the lungs, which have numerous small balloon like sacs called alveoli. These sacs are filled with oxygen and exchange of gases takes place here. Now the bacteria occupy these sacs and fill them with liquid thus resulting in breathlessness.

To solve this problem, look at fig -1.

Figure-1

This is the way we normally lie down (with face up). The small dots represent the sacs/alveoli, which are about 50 crore in number. In this position, the gravitational pressure of heart and the gravitational pressure of abdomen lie on the corner of the lungs and

as a result, the balloons squeeze in size thereby about 20% capacity of the lungs is reduced. A healthy human being has no effect with the 20% reduction in the lungs capacity but when one is sick (since 20% is compromised), it affects him badly. If we can take away the gravitational pressure of the heart and the abdomen, then we can utilize that 20%. For this, we need to change the posture, it is called prone positioning or **prone ventilation**. As you can see in fig -2, the small balloons become bigger in size and this increases the capacity of the lungs by about 20% and that is the distance between life and death. The person, who was earlier on the verge of death, now survives.

Figure-2

Mechanism of Prone Ventilation

Prone

Less Abdominal Pressure

+

Less Heart Pressure

+

Increased Alveoli Capacity

+

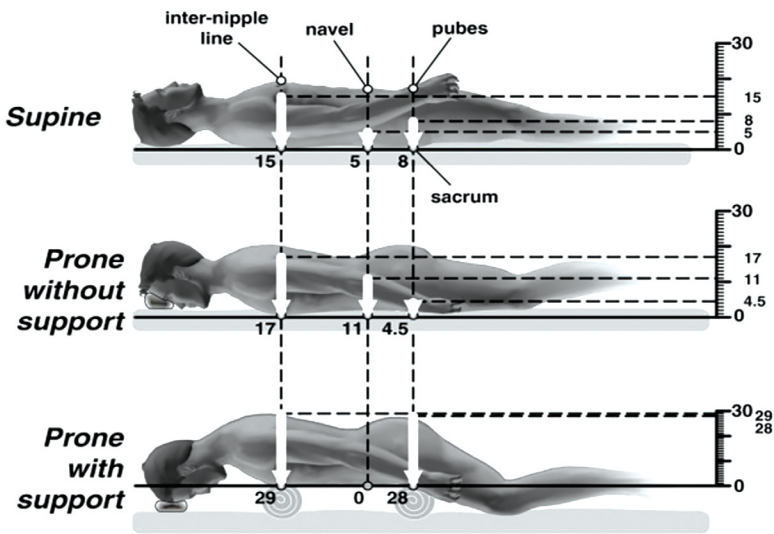

Improved Breathing

Respiratory Care. August 2017 Vol 62 No 8

Prone ventilation has been in practice since 1970s. In the last one decade or so, when the mechanical ventilator became popular, prone ventilation and other such things were sidelined to promote the sale of mechanical ventilator and for material gains. Prone ventilation has no side effects as compared to the mechanical ventilator, which

has four dangerous side effects resulting in nine deaths out of ten. On May 15, 2020, in the *Journal of American Medical Association*, researchers examined 500 or more Covid-19 patients, who were put on Prone ventilation, no one died. All of them survived. Thus, on the one hand is mechanical ventilator, which is very expensive and painful and causes most of the deaths and on the other hand, is Prone ventilation which can be done at home and has no side effects and the cure rate is 100% especially for Covid-19 patients.

To conclude, when you put a person on Prone ventilation, the abdominal as well as the heart pressure are less, there is increased alveoli capacity and thus improved breathing. All this is expected in about half an hour. But here the recommendation is that the patient should be in Prone ventilation posture for at least 12 hours in a day because the moment he gets up, the breathing problem would start. He may take a break of 10-15 minutes every hour. During the break, he can move his body and be in any posture.

Chiumello et al., 2006 <https://www.ncbi.nlm.nih.gov/pubmed/16764731>

In order to make the patient comfortable in Prone ventilation position, a pillow can be placed as shown in the picture, since some people have big bellies. The big belly may compress the lungs as a result you may not get the advantage of 20%. How to adjust the pillow can be decided by the comfort level of the patient. Motivate the patient to be in this position for many hours to get the permanent advantage. This is how one can manage the emergency breathing problems.

I reiterate that in the hospital set up there are no evidence(s) for oxygen cylinder and mechanical ventilator saving people's lives while there are plenty of evidences in favour of fan being used instead of oxygen cylinder and prone ventilation instead of mechanical ventilator. These evidences clearly state that a set up at home is devoid of side effects and there are increased chances of survival; the chances of mortality are, in fact, reduced. So a patient is safe in the home setting. Don't advise him to go to the hospital since it would worsen his chances of survival.

Managing Uncontrolled Cough

If a person complains of uncontrolled cough, immediately along with the three day Flu diet, start turmeric therapy. Ask the patient to consume a small piece (0.5 gm) of raw/fresh turmeric three times a day- before breakfast, before lunch and before dinner. Normally, we recommend raw/fresh turmeric on the fourth day when the patient is on D.I.P. diet. If the patient does not get relief, double the dose of

raw/fresh turmeric i.e. instead of three pieces of raw turmeric, give him raw turmeric pieces six times a day. The cough will be managed in 2-3 days time. Meanwhile, motivate the patient not to lose heart. His problems would subside soon.

Uncontrolled Cough Management

**Double the dose of Turmeric
(Six times a day along with the prescribed diet.)**

Fever Management

As long as the temperature is $\leq 102^{\circ}$ F, there is no need to worry. If the temperature crosses 102° F, go in for cold compress and cold air for 15 minutes. If the patient starts shivering, stop the process. After a gap of half an hour, repeat the process- cold compress and cold air for 15 minutes. If he starts shivering or if the temperature comes down, stop the process. Sometimes the temperature is 103° F - 104° F, don't panic. Avoid the intake of anti-pyretic drugs, which may reduce the temperature but not reduce the chances of seizure which may otherwise occur due to increased temperature. There is no evidence that Paracetamol/antipyretic drugs can help a person to live a longer life or it can help to avoid the seizure. Even if temperature gets very high, don't panic because our body has its own homeostasis and will not let the temperature be dangerously high. It knows at what temperature the virus can be killed. So the body has its own mechanism to get rid of the virus. On a safer side, keep providing cold compress and cold air and continue to follow the three day Flu diet.

In my last 12 years of managing the ILI/Flu patients, it has not occurred even once, when the temperature could not be controlled with this strategy.

Vomiting Management

If the patient complains of vomiting, stop his eating and drinking for 4 hours. If need be, simple water or coconut water can be given. Vomiting may not be a comfortable thing but it is not bad either. It is an indication of some infection in the body which the body wants to get rid of. Don't panic. Keep calm. Nobody dies by vomiting. Try to comfort the patient.

Nausea and Weakness

It is seen that many people panic when they feel weak or have nausea. Remember, no one is going to die with weakness and nausea; there won't be any permanent damage either. Comfort the patient by giving him a small piece of fresh ginger 3-4 times a day. Ginger provides strength. If the patient refuses to do so, crush the ginger and boil it in water. Add some lemon and little honey to it. Ask the patient to sip it. He will get strength and energy. Once the temperature subsides, he will get rid of all the problems.

Loose Motions

It has been observed that sometimes patients experience loose motions while following the three step Flu diet. If the loose motions occur more than 6-7 times, then the patient should stop consuming citrus fruit juice (if he is on three step Flu diet) or fruits and salad (if he is on D.I.P. diet) and take only coconut water till loose motions subside or completely stop.

Three Step Flu Diet Study with Government of Maharashtra Covid Centre

Curing Covid-19 in 72 hours!

Specially when the person is a senior citizen with co-morbid condition and presented with severe Pneumonia..... seems to be an impossible feat rather an absurd dream.

However, our consultants and N.I.C.E. practitioners Dr Nilesh Patil and Dr Pallavi Patil could make this impossible.....possible.

The story starts with pursuing the Maharashtra government, Jalgaon Covid-19 centre officials to permit them to treat Covid-19 patients with the 'three step Flu diet'. They got the permission to treat four patients with the condition that the diet needed for the patients would be paid by Dr Nilesh and his team. On July 9, 2020, Dr Nilesh and Dr Pallavi Patil received the patients. Among them two were severely ill with Pneumonia and co-morbid conditions and the rest two were in moderate condition.

By the end of 72 hours of following the three step Flu diet, all of them were relieved of all the Covid-19 symptoms and the three of them tested negative for Covid-19 which includes both the severely ill senior citizens with co-morbid conditions. Please refer to the summary letter issued by the Jalgaon district Covid centre.

Result

After 72 hours of the three step Flu diet,

- 100% of the patients were relieved of all the symptoms.
- 75% of the patients tested negative for Covid-19.

Second Study with Maharashtra Government Covid-19 Centre

What happens if the Covid-19 patients follow the three step Flu diet just for 48 hours?

Once again, Dr Nilesh Patil and Dr Pallavi Patil got the permission to treat the Covid-19 patients for 48 hours with the three step Flu diet, but with the condition of bearing the expense of the second Covid-19 test.

This time our N.I.C.E. practitioners received 20 Covid-19 patients for 48 hours (July 2, 2020 to July 3, 2020). The patient with minimum age was of 11 years and the oldest was 85 years of age. Among them, 13 were male and seven were female. On July 14, 2020, the NP swab were taken for Covid-19 test.

Result

- 12 patients tested negative for Covid-19.
- 8 patients tested positive.

Conclusion

60% of the Covid-19 patients could reverse Covid-19 within two days of following the three step Flu diet.

Like Dr. Nilesh & Dr. Pallavi Patil, similar activities are being conducted by the Director General of Police, Shri Hari Narayan Chari Mishra, for the Corona positive policemen in Indore and is able to get Corona negative within 3 to 5 days of prescribing the

three step Flu diet. His coverage in the leading newspaper of Indore (Dainik Bhaskar) is testimony of his work.

मंडे पॉजिटिव ■ वीडियो कॉलिंग के जरिये होटल में त्वारेंटाइन पुलिसकर्मियों से खुद बात कर रहे वियतनाम, कम्बोडिया का इम्युनिटी बढ़ाने वाला डाइट प्लान डीआईजी ने जवानों पर लागू किया, 3 दिन में रिपोर्ट निगेटिव

सुमित टायगर | इंदौर

कोरोना संक्रमण को च्चेष्ट में आने वाले पुलिसकर्मियों के लिए डीआईजी खुद केयर टेकर बन गए हैं। होटल में क्वारेंटाइन जवानों से वीडियो कॉलिंग के माध्यम से सैलत का हलचल जानने के साथ ही उन्होंने विभाग के संक्रमित स्टाफ के लिए इम्युनिटी बढ़ाने वाला एक डाइट प्लान भी तैयार किया है। इस डाइट प्लान के जरिये वे तीन जवानों को ठीक कर चुके हैं। डीआईजी शंतिशरणाचारी मिश्र ने बताया अपने वियतनाम, कंबोडिया और साउथ एशिया के मरीजों पर

भारतीय डॉक्टरों द्वारा डाइट ट्रेटमेंट को जानकर उसे समझा। इस डाइट में नारियल पानी, संतरे का जूस, नींबू और ककड़ी, गाजर को तीन दिन तक तय समयानुसार कॉबिड पॉजिटिव को दिया गया। इसके स्कारात्मक परिणाम सामने आए हैं। जवान नारायण पटेल जो बीते सप्ताह पॉजिटिव निकले थे, तीन दिन नन्हें यह डाइट दी गई। इससे तीन दिन में रिपोर्ट निगेटिव आ गई। तीन और जवानों में तेजी से सुधार हो रहा है। वियतनाम में डॉ. विश्वरूप चौधरी भी इस डाइट ट्रेटमेंट से कई कॉबिड मरीजों को ठीक कर चुके हैं।

जवानों से वीडियो कॉलिंग करते डीआईजी

कारगर साबित हो सकता है यह डाइट प्लान : डॉक्टर

पल्सेनोलासिस्ट डॉ. सखिल भार्गव कहते हैं वे सभी फल और खाने को चीजें जिनमें विटामिन, पीटी आक्सिडेंट रहते हैं, वह सब रंगीर शरीर को इम्युनिटी बेहतर करते हैं। इसलिए यह डाइट प्लान कारगर साबित हो सकता है।

तीन दिन का डाइट प्लान

पहला दिन : विटामिन सी की लिनिबिड डाइट जैसे नींबू पानी, संतरा-मीसंबी का जूस, नारियल पानी दिया जात है।

दूसरा दिन : अल्काइन फूड में थोड़ा टोमै जैसे गाजर, खीरा (ककड़ी), प्रोटीन के लिए अंडा या अंकुरित अनाज, दूध आदि। दिन में चाय व गर्म पानी में काफ़ा इम्युनिटी बढ़ाने के लिए दिया जात है।

तीसरा दिन : सार्ड फूड वह भी प्रोटीनयुक्त ही दिया जात है।

Build your Own Super Specialty Hospital @ Home in Koronakaal

- There is no evidence to show that a mask can protect you from getting infection whereas there is a huge amount of data (as you have seen in the previous chapters) to show that wearing a mask can make you sick.
- There is no evidence and there is no scientific basis that the lockdown can halt or reduce the mortality due to SARS-CoV-2 or any other virus but there are substantial evidences³⁹ to prove that lockdown resulted in more Corona related deaths and also increased mortality⁴⁰ due to the lockdown and social distancing measures. Even WHO has reported⁴¹ in October 2019 that lockdown cannot reduce the mortality from a particular virus.
- All the drugs (anti-HIV/anti-malaria/anti-pyretic/antibiotic) and non-drug medical intervention (ventillator support/plasma therapy) that were experimented on humans in the name of Covid-19 cure without any supporting evidences, however, now we know, have caused more harm and deaths⁴².
- There is no evidence either to prove that SARS-CoV-2 is a new virus, a lethal virus and a virus with a high transmission rate. However, I have given enough evidence in the book to prove that it is the other way round.

- With all the evidences and the treatment strategies given in the book, it is safe to conclude that the SARS-CoV-2 is a normal Flu virus and has been there with the mankind for a long time and there is nothing new.

What is new is the mind game- trying to control the population through the weapon of fear, as our psychological consultant Dr Hema Gupta says that the best way to control the human mind is to use the **Walter-Barbe-Raymond Swassing Model** i.e. feeding a fake information, and repeated through all the three senses (auditory, visual and kinesthetic), leading one to believe it to be true and real.

Here the modus operandi is very simple.

Using all the three major senses:

Audio: Repeated warning messages through the caller tune.

Visual: 24 × 7 visual fabricated/fake number of deaths (as I proved in the previous chapters) due to Covid-19 telecasted through television channels.

Kinesthetic: Wearing the mask and sanitizing the hands several times in a day, social distancing etc.

Repeated bombardment of fabricated information several times a day for several days continuously leads to the corrupting of human brain, leading to the disruption of his logical thinking and common sense leading to entering into the mode of slavery.

As a result of the above trickery, the mind of the masses gets corrupted to the extent that they are ready to shell out any amount of money (even Rs 3 lakh to Rs 30 lakh) for a bed in the hospital with the hope of treating Covid-19, which in reality does not exist .

I don't have any doubt that when a shady vaccine will be launched in the name of Covid-19 prevention, all will line up to get one and if the usual and expected side effects of vaccine (including death) occur, then it will be given a new name and will be called a new

disease, which co-incidentally arrived at the same time and among the same people who are vaccinated [Do remember every year, on an average 50,000 new cases of vaccine induced Polio occur in India, but they are given a new name AFNPP (Acute Flacid Non Polio Paralysis)]⁴³.

Here the partners to this conspiracy are the pharmaceutical companies and modern medicines using their mouthpiece- the WHO, to create a bizarre rather shocking virus prevention rules. For instance, dead body packed in a plastic bag, to be handed over to the relative, not to be opened and at any moment, not more than two relatives are allowed to be present near the dead body and also minimum one metre distance to be maintained from the dead body⁴⁴.

Here if you recall your school text book, you will know that any virus- to multiply and spread in the body is dependent on biochemical energy i.e. adenosine triphosphate (ATP), but once the person is dead, the cells stop making ATP almost immediately after the death hence no possibility of further multiplication of a virus. There may be some virus left which was produced immediately before the death. But in case of SARS-CoV-2, the primary route of transmission is through the droplets expelled while talking, coughing or sneezing. Since the dead bodies cannot breathe, there is no chance of transmission of SARS-CoV-2 through the dead body.

To my understanding, the main cause of creating a special protocol to handle the Covid-19 dead bodies is to cover up the real/true cause of death, which in the majority of cases, is the experimental medication and the lethal untested interventions (plasma therapy). I also fear that prohibiting the kin/relative to see/inspect the dead body will promote an already high margin business of red market (organ trafficking). Reading only one page (page 65) of my book,

*Why the Mortality Rate Drops When Doctors Go on Strike?*⁴⁵ will give you the horrific dark truth of red market.

Now keeping in mind the facts and also the present scenario of the hospitals labelling the non Covid death as Covid death (as discussed in the 1st chapter), it is not advisable to go to the hospital for any reason. Rather it is time to upgrade yourself so that you become your own doctor and let your home be your hospital.

The best way to treat yourself at home is to learn from the revolutionary D.I.P. diet.

From common cold to Cancer,

Depression to Diabetes

This D.I.P. diet can be the fastest, safest and long lasting cure for more than 60 most commonly occurring diseases among humans. Even All India Institute of Ayurveda (under the ministry of Ayush) has conducted clinical trial⁴⁶ (TRI/2018/016654, registered on 13/12/2018) for D.I.P. diet, under the guidance of Dr. S.K Gupta (HOD, Department of Shalya Tantra). The research scholar of the trial Dr Monika Sodhe reported a clear cut evidence of benefit in case of the back pain (the primary purpose of the study), the improvement is noted in terms of Thyroid, Blood Sugar, Blood Pressure etc as well.

In fact, in the last 12 years of my clinical practice in India, Vietnam (since 2014) and Malaysia (since 2017), more than 22000 patients from various illnesses have adopted the D.I.P. diet. The time line of reversal of disease based on the feedback of the patients and also my case study reports⁴⁷ is as follows:

VIP Diet → D.I.P. Diet	
24hrs to 72hrs	Diabetes
3 days to 1 week	High Blood Pressure, High Cholesterol, Intestinal disorder
1 month	Obesity, Heart Diseases
2 month	Thyroid Disease
6 month	Cancer, Asthma, Arthritis
8 month	Skin Disorder, Kidney dysfunction, Liver disorder

STEPS TO DESIGN YOUR PERSONALIZED D.I.P. DIET:

Step-I

Till 12 noon, eat only fruits of 3 to 4 types including mango, banana, grapes, etc.

Minimum amount to be consumed = Your body weight in kg × 10
=gm

For example, a 70 kg person should consume atleast 700 gm of 4 types of fruits before 12 noon.

Step-II

Always eat your lunch/dinner in 2 plates. Plate 1 and Plate 2

Plate 1 should consist of 4 types of vegetables like carrot, tomato, radish and cucumber etc. in raw form.

Minimum amount in Plate 1 = Your body weight in kg × 5 = gm

For example, a 70 kg person should eat at least 350 gm of 4 types of raw vegetables.

Plate 2 should consist of home cooked vegetarian food with negligible salt and oil.

First finish eating from plate 1 in accordance with the above calculation, then take from plate 2 as much as you want. The rules for lunch and dinner are the same; however, you must remember to finish dinner by 7 pm.

Step-III

To Avoid	Snacking
1. Packed food	1. Soaked nuts: Your wt(kg) =.....gm (For 70kgs person about 70gms of nuts in a day)
2. Refined food	2. Fruits: Plenty
3. Dairy food/Animal foods	3. Coconut water: As you like
4. Nutritional supplements	4. Hunza Tea: As you like
5. Avoid drinking tea/coffee specially before lunch	5. Sprouts: Your Wt(kg)=.....gm
6. Never eat after 8pm	6. Coconut: As you like
7. NSAID's	7. Sunshine: 45min

You may need to modify and customize the above standard D.I.P. diet based on your symptoms/medical conditions and age. To learn to customize, refer to “Game of Life (GOL)”⁴⁸ and you will know that whether you are a third stage Cancer patient or a highly Diabetic- insulin dependent person, the fastest, safest and the long lasting way to cure is at the comfort of your home by using “Food as Medicine”.

SECTION-II

List Of Patients, Who Got Cured Using N.I.C.E Protocol

Below is the list of a few of the 5000+successfully cured patients. We are updating the video testimonials of the patients on continuous basis at www.biswaroop.com/nicebook

Government health agencies may contact us at biswaroop@biswaroop.com/+91-9313378451 to get access to the complete list of patients with diagnostic documents and related materials.

Patient **Arun Kumar** from *Ludhiana* age 25 yrs reported to N.I.C.E with the symptoms of **Fever, Headache, Body ache/muscle ache, Tiredness** on **28-Jun-20** with co morbidity like **asthma** got cured in **4 days** under the N.I.C.E Care of **Kanishk Amarpuri**

Patient **Jenny Fernandes** from *Kuwait* age 45 yrs reported to N.I.C.E with the symptoms of **Dry Cough/ Sore throat/Body ache/ muscle ache / Congestion/ Tiredness/Weakness** on **07-Jul-20** got cured in **7 days** under the N.I.C.E Care of **Filda Don**

Patient **Akshay Gorade** from *Mumbai* age 32 yrs reported to N.I.C.E with the symptoms of **Fever, Sore throat, and body ache/ muscle ache** on **26-Jun-20** with co morbidity like **hypertension** got cured in **7 days** under the N.I.C.E Care of **Sudhir Kumar**

Patient **Aakansha** from *New Delhi* age 32 yrs reported to N.I.C.E with the symptoms of **Fever, Dry Cough, Sore throat, Body ache/ muscle ache, Tiredness** on **24-Jun-20** with co morbidity like **hypertension** got cured in **5 days** under the N.I.C.E Care of **Filda Don**

Patient **Narinder Pal Singh** from *Dubai* age 60 yrs reported to N.I.C.E with the symptoms of **Fever, Dry Cough, Sore throat, Body ache/muscle ache, Tiredness** on **22-Jun-20** got cured in **5 days** under the N.I.C.E Care of **Rupesh Kumar**

Patient **Ajay Arungaikwad** from *Thane* age 27 yrs reported to N.I.C.E with the symptoms of **Fever, Sore throat, Body ache/muscle ache, Tiredness, breathing difficulty** on **24-Jun-20** with co morbidity like **Heart Disease** got cured in **5 days** under the N.I.C.E Care of **Sounak Das**

Patient **Karshil Shah** from *Ahmedabad* age 12 yrs reported to N.I.C.E with the symptoms of **Fever** on **25-Jun-20** with co morbidity like **hypothyroidism** got cured in **4 days** under the N.I.C.E Care of **Bimal Pal**

Patient **Moin Hussaini** from *Doha* age 49 yrs reported to N.I.C.E with the symptoms of **Fever, Dry Cough, Sore throat, Headache, Body ache/muscle ache, Tiredness, breathing difficulty** on **28-Jun-20** got cured in **3 days** under the N.I.C.E Care of **Shaikh Warisha Nasim**

Patient **Akbarali Kherdiwala** from *Daman* age 50 yrs reported to N.I.C.E with the symptoms of **breathing difficulty** on **25-Jun-20** got cured in **4 days** under the N.I.C.E Care of **Satish Kumar Varma Vuppalapati**

Patient **Anisha** from *Pune* age 31 yrs reported to N.I.C.E with the symptom of **breathing difficulty** on **24-Jun-20** with co morbidity like **thyroid** got cured in **6 days** under the N.I.C.E Care of **Dr. C Rajasekhar**

Patient **Mohammad Iqbal** from *Bahrain* sage 42 yrs reported to N.I.C.E with the symptoms of **Fever, Tiredness** on **07-Feb-20** got cured in **days** under the N.I.C.E Care of **Rajwinder Kaur**

Profession: Biotechnologist, Diabetes Educator, RICH Course

How to End Covid-19 Pandemic?

To know the answer to the above question, we need to go back to the first death allegedly due to Covid -19. It occurred on Jan 9, 2020, when a 61 year old patient died in Wuhan⁴⁹.

Two important factors need to be considered here:

- 1) The patient was already suffering from abdomen Cancer and liver disease, besides being old (61 yrs)⁵⁰.
- 2) No biopsy matter was taken after death⁵¹.

With the above factors in consideration, how can one conclude that the death is due to SARS-CoV-2 and not due to Cancer or liver disease?

In fact, whenever autopsies were done on the dead bodies of supposedly Covid-19 patients⁵², virus was never found to be the cause of death. For me, raising a doubt about SARS-CoV-2 to be the true cause of illness becomes more firm when I see the inconsistency in the 2nd RT –PCR Test diagnostic reports of my N.I.C.E patients .

The major inconsistencies are :

- 1) Patients still demonstrating symptoms of Flu, however, got the 2nd PCR test for Covid-19 to be negative (the first one was positive).
- 2) With many of the patients, showing 2nd RT–PCR Test for Covid-19 positive even after resolving all the symptoms (the first Covid-19 test was positive for all of them).

To put an end to the dispute, whether a particular pathogen is responsible for a disease, a gold standard test, called Koch's Postulate,

was taken into consideration. It has been in use since 1890s and is relevant even today.

Even the SARS (2003) Corona virus fulfilled the Koch's Postulate⁵³ and hence established as a true cause of Severe Acute Respiratory Syndrome. However, in case of SARS-CoV-2, it had not been tested for Koch's Postulate⁵⁴

Koch's Postulates⁵⁵

- 1) The microorganism must be found in all cases of the disease
- 2) It must be isolated from the host and grown in pure culture
- 3) It must reproduce the original disease when introduced into a susceptible host
- 4) It must be found present in the experimental host so infected

My conclusion and demand from regulating authorities are as follows:

- 1) Autopsy should be done on the suspected Covid-19 death before announcing it to be a Covid-19 death.
- 2) Koch's postulates should be fulfilled for SARS-CoV-2 virus; only then epidemic/pandemic can be truly established.
- 3) All Flu cases (including Covid-19) should be treated with three step Flu diet, at home itself, as with this strategy, we have achieved 0% CFR and more than 80% recovered rate within 72 hours of three step Flu diet intervention.

One Month Online Certification

Be a Certified "ILI Educator" from Shridhar University

Overview: The world has virtually stopped with the announcement of Covid-19 pandemic by WHO; the only thing to save mankind and bring the life back to normal is up to date knowledge about the truth of SARS-COV-2 and curing /managing Covid-19 . Shridhar University is the first university to launch fast-track one-month practice-oriented training to equip you with the knowledge which is the need of the hour.

Duration: 1 month

Content:

- What is Influenza like illness (ILI) ?
- Diagnosis of ILI
- History and Chemistry of Corona and other Flu Viruses
- Steps Diet to Cure Covid-19/ILI
- Strategy to Prevent ILI
- Caring for ILI (Covid-19) Patients
- Practice and Hand on Training on Real Patient (under the supervision of Dr. Biswaroop Roy Chowdhury and his medical team)

Course Fee: INR 11,800/- (including GST)

Mode of Training: Online/ viva (oral examination) through a video call

The Ultimate honor in alternative medicine...

Let every morning be the Hunza Morning

If you have decided to pick only one of my suggestions for the sake of your health, then take this suggestion :

Stop consuming tea specially, morning tea. The early morning tea makes the inner lining of your intestinal wall acidic, as after a long night of fasting your stomach is empty and craving for food. An acidic stomach on a regular basis is the single biggest cause of all kind of inflammatory and lifestyle diseases including arthritis, Diabetes etc.

How to stop craving of tea —————> Switch to Hunza Tea

Hunza Civilization: Hunza people are the Indians living at extreme northwest of India in Hindu Kush range. They are known to be one of the world's healthiest civilizations, often living up to the age of 110 years.

How to prepare Hunza Tea (serves four):

Ingredients:

- 12 Mint leaves(Pudina)
- 8 Basil Leaves(Tulsi)
- 4 Green cardamom (Elaichi)
- 2 gm Cinnamon (Dalchini)
- 20 gm Ginger (Adrak)
- 20 gm Jaggery (Gur)

Instructions:

- Take 4 cups of water in a tea pan
- Add all ingredients, simmer it for 10mins
- Add a dash of lemon juice and serve hot or cold

For those who are too lazy to collect the above ingredients (to make their own hunza tea) may order

76 Cups
of
Hunza
Health

₹ 350/-
(Including Courier charges)

A step by Step Guide to a Smarter Memory

By Neerja Roy Chowdhury

This book will show you how to:

- Memorize a dictionary
- Never forget any appointment
- Recall every formula correctly
- Remember the shopping lists, birthdays and anniversaries etc.
- Overcome absent mindedness
- Memory techniques to achieve career goals
- Secure better marks in every exam

About the author:

Neerja Roy Chowdhury, the name can be found in prestigious record books including Guinness Book of World Records and Indo-China Book of Records for diverse reasons. The most interesting of all is her ability to memorize the complete Oxford English-Hindi Dictionary. She has also developed software for memorizing a dictionary. She has travelled more than 100 cities internationally in last one decade training people on 'Memory Techniques'. Her latest book 'Smarter Memory' is published by Rupa Publication. Presently she is involved in developing curriculum in memory techniques for international universities.
