BARABATI DIAGNOSTICS

NAME: SRIKRUSHNA KARAN
REGISTRATION DATE: 20.09.2024
PATIENT ID :- 76428

AGE/SEX: 52 YRS/MALE
REPORTING DATE: 20.09.2024

MRI OF TONGUE (PLAIN + CONTRAST)

CLINICAL DETAILS: K/C/O Ca tongue

Contrast used: Yes

Contrast name: Gadobright

PROTOCOL : MRI of the tongue was performed using T1 and T2 weighted sequences in multiple planes. Post contrast multiplanar images were acquired after injection of 10 ml of IV Gadobright .

(Quality of image-adequate)

ADRS: No

FINDINGS:

- There is an enhancing lesion in the right lateral aspect of tongue posteriorly measuring about 4.1 x 3.2 x 4.1 cms (AP x Trans x CC) extending across the midline. There is fat stranding and involvement of floor of mouth along with right side neurovascular bundle.
- Enlarged lymphnodes are noted in bilateral level IB and bilateral level II, largest measuring about 1.4 x 1.3 cms in right level I B.
- Lingual neurovascular bundle on left side is unremarkable.
- Base of tongue is normal.
- Valleculae are symmetrical, bilaterally.
- Rest of the oral cavity, nasal cavities, oro-hypopharynx are unremarkable. Bilateral pyriform sinuses are symmetrical and appear normal.
- There is no gross nasopharyngeal mass. The bilateral fossa of Rosenmuller are intact.
- The laryngeal ventricle, true and false vocal cords appear unremarkable.
- The parapharyngeal and carotid spaces appear normal. The common carotid arteries and internal jugular veins are normal.
- Pterygomaxillary fissures are not widened and no abnormal soft tissue noted.
- The thyroid and the arytenoid cartilages appear normal.

- The thyroid gland is symmetrical and normal.
- Visualized portions of brain are unremarkable.
- Normal lung apices and brachial plexus.
- There is no osteolytic or osteosclerotic lesion present.

IMPRESSION:

- ENHANCING LESION IN THE RIGHT LATERAL ASPECT OF TONGUE POSTERIORLY EXTENDING ACROSS THE MIDLINE WITH FAT STRANDING AND INVOLVEMENT OF FLOOR OF MOUTH ALONG WITH RIGHT SIDE NEUROVASCULAR BUNDLE - NEOPLASTIC - LIKELY CA TONGUE .
- ENLARGED LYMPHNODES IN BILATERAL LEVEL IB AND BILATERAL LEVEL II, LARGEST IN RIGHT LEVEL I B - METASTATIC.

Final Diagnosis: CA MID 1/3RD OF TONGUE
EXTENDING TO FLOOR OF
MOUTH

Reason for Admission
RAQDIOTHERAPY.

Treatment given during course Hospital: Concluded Radical External Beam Radiotherapy to B/L Face and Neck, with a dose of 66Gy/33#/6.5weeks, from 19/12/2024 to 03/02/2025, @ 2Gy/#, 5#/week, from Monday to Friday on True Beam with IGRT technique.
Skin = Gr - II
Mucositis = Gr - II

Condition or the time of discharge: Satisfactory / DOR / LAMA / DAMA
Satisfactory.

Advice on Discharge:

Rx.

1. Syp. Zinviron 2tsf BD x 1.5 months.
2. Syp. PMore 3tsf BD x BF x 1.5 months.
